About Me

Hi! I'm a Senior Software Engineer with 9+ years of experience, mostly focused on web development and leading technical teams. My aim is to enhance user experience and create meaningful value by staying closely connected with end users, while delivering clean, scalable code. I build strong, genuine relationships with my team and support their growth and development. I am a self-learner, open-minded about tools and technology stacks, and always ready for new challenges.

Skills

In summary, i have experience working with these tools and often use them:

- Python, JS/TS
- System Design, Architecture
- Linux, Nginx, DevOps Basics
- Django, FastAPI, Pandas
- Docker, Kubernetes
- AI-Assisted Development, Claude Code
- React, Next.js
- GitHub/GitLab CI/CD
- LLM Feature Integration

Experiences

FullStack Developer

Apr 2022 - May 2026
Munich, Bavaria, Germany
Full-time

TrustYou

Python, FastAPI, Django, Flask, React, Docker, Kubernetes,

TrustYou is an AI-first, global hospitality platform helping hospitality brands improve customer excellence, increase direct bookings, reduce operational costs, and turn guest data into revenue-generating opportunities. Since 2008, TrustYou has enabled hotels, destinations, and travel brands worldwide to transform guest feedback, customer data, and automated interactions into actionable insights and personalized guest experiences. The platform combines a Customer Experience Platform (CXP), Customer Data Platform (CDP), and AI Agents to help businesses improve service quality, manage customer data in a GDPR-compliant way, respond to feedback with AI, automate repetitive tasks, and optimize guest engagement across the customer journey.

trustyou.com

Responsibilities:

- Developing full-stack systems with Python, Django, FastAPI, React, and Next.js
- Building CXP, CDP, AI-powered features, and travel platform integrations
- Leading feature delivery from planning to production release
- Handling incidents, root-cause analysis, and operational improvements
- Mentoring engineers through reviews, testing, and technical guidance

Contributions:

- Migrated key data flows, product features, and integrations from Classic to CXP with minimal business disruption
- Reduced recurring data sync failures by 35% through improved pipeline reliability and observability
- Delivered direct response features for Google and Booking.com integrations, supporting feedback workflows across 2 major travel platforms
- Reduced maintenance effort in legacy alerting and operations systems by 30% through refactoring and modernization
- Built shared services and reusable components adopted by engineering teams
- Reduced manual effort in selected feedback workflows by 25% through AI-assisted customer-facing features
- Managed technical communication with stakeholders, including Accor and Louvre Hotels, across product, engineering, and operations
- Reduced recurring incidents by 20% through structured triage, root-cause analysis, and follow-up actions

Achievements:

- Improved reliability and maintainability across customer-facing and internal systems
- Reduced integration-related incidents in CXP data pipelines
- Improved engineering productivity through shared services and reusable components
- Supported the modernization of core platform areas from Classic to CXP

CTO - Web Developer

SnappCarFix / CarFillo

Python, Django, React, Memcached, Celery, Docker,

Sep 2019 - Apr 2022
Isfahan, Iran
Full-time

SnappCarFix is an online platform for Car parts and services, backed by Snapp (Uber clone). It includes web apps for Stores, ServiceCenters, Agents, and Sellers, to offer products/services like oil, battery, engine parts, car wash, etc, with 7 delivery/service solutions per product. CarFillo sells products to service centers, it's an Online Shop, which service centers gain credits here based on their services on SnappCarFix.

snappcarfix.com ag.snappcarfix.com sc.snappcarfix.com carfillo.com

Responsibilities:

- Leading developers team (10-15 developers)
- Develop and deliver platform
- Specifying platform technical structure and tools
- Managing and targeting technical parts of contracts

Contributions:

- Restructured the platform from WordPress and .net to Python/Django/React, handled more requests, with better UI/UX, and fewer development hassles
- Changed development process to a TDD version, managed with Agile methodologies
- Specified an interview to the onboarding process, interviewed over 50 people, and hired 20
- Replaced ServiceCenters app with PWA, gained real-time updates, 60% faster service submits
- Created Agents app, made data gathering 80% faster and completely paperless
- Developed a core module to structure both Django and React projects and utilities
- Restructured DevOps solutions, added cache layers, Docker, GitLab CI/CD, monitoring, logging, and backup plans, gained 10k RPS handling and 50% faster response times
- Created Accounting and Logistic modules, decreased manual work and human mistakes
- Created Sellers platform to gain faster products warehouse stock and price updates
- Rewritten Panda project to Matrix, with Django 3.2, added Kubernetes and secured credentials
- Rewritten T2Bco project to Radix, from .net to Python/Django/React

Achievements:

- Standing on top of quick service e-commerce in the Middle East
- Recording over 1.5 million users and their vehicle data
- Recording over 16,000 service centers in the whole country
- Recording over 15,000 online orders and 2,500 services per day
- Upgrading e-commerce share of GDP by 1.5%, decreasing logistic costs by 45%

Web Developer

Jun 2019 - Nov 2019
Ontario, Canada
Part-time (Remote)

Press'nXPress

JS/TS, NestJS, React, Angular, MySQL,

Press'nXPress is monitoring & measuring feedbacks in the real-time platform which gathers data from multiple sources like Terminals and Chips our company created, SMS, Voice, etc. Data will be stored and analyzed to multiple charts letting users perform needed queries. We had customers like Airlines, Governments, Malls, and Gyms.

pressnxpress.com scanortap.com

Contributions:

- Developed backend, frontend, and admin panels of scanortap with NestJS and React
- Refactored some parts of main platform from SailJS to NestJS and Angular to React

Web Developer

Sep 2018 - Sep 2019
Isfahan, Iran
Part-time

Motosel

Python, Django, JS/TS, React, ReactNative,

A platform for car consumables which includes multiple web/mobile apps for ServiceCenters and Stores. The aim was to sell oil and related products to service centers with great offers, and increase their customers. This Company later split into two companies, CarFillo and SnappCarFix (backed by Snapp, Uber clone in Iran), which i'm working as CTO on both of them.

Contributions:

- Refactored and restructured core backend project with Python/Django
- Developed a microservice to sync data between Stores and ServiceCenters
- Developed a real-time messaging module for in-app chats

Backend Developer

Aug 2018 - Sep 2018
Tehran, Iran
Internship

Rahnema College

Python, Django, JS/TS, ReactNative, MySQL, Redis,

Rahnema College is one of the most valuable internship programs in Iran, with multiple courses like Development, Digital Marketing and etc. They select 30 interns from over 1000 volunteers, after an online exam and in-person interview. The program contains 2 weeks of learning technical and soft skills (from DevOps to Teamwork) and 8 weeks of developing.

Contributions:

- Developed & managed backend project (combination of Instagram and Pinterest features)
- Configured and deployed project on linux server with nginx and mysql

Web Developer

Apr 2016 - May 2017

Mashhad, Iran

Full-time

Saj Tech

Python, Django, JS, HTML, CSS, MySQL,

The platform was a location-based delivery and management application for stores, with ideas of delivery with drones. Unfortunately, this company went bankrupt because of a lack of funding after two years.

Contributions:

- Developed users, warehouse modules using Django
- Developed APIs for admin panels and our Android app
- Developed 3 frontend projects including 2 websites and an Admin panel
